

My major project is to create a shadow website for the San Francisco Public Library using HTML/CSS. The purpose of my project is to create a website for people to know more about the library and the activities in the libraries. My project supports my non-profit by making a website for them. I plan to have the basic frame of my website on 7/27/23, adding in details by 7/29/23, and completing or making it look better by 7/31/23.
