

## Major Project Proposal:

- My major project is to create a Html website with the skills of learning from the past few weeks like CSS and JavaScript to apply it on creating the website for the non-profit. The purpose of this project is to inform others or new people about the things that the SF Recreation and Parks offers from their programs, volunteership, sports, events, and many open spaces, which this project supports the non-profit by allowing people to know the things that the city and its organization offers to all ages of people. I'm planning to create one page per day and to fix any incoming bugs/errors.

### Timeline:

#### Day 1

- Create Navigation Bar for all of the above (Home, Event, Program, Locations) and Search Bar
- Start HomePage
- Add Contact Us Section

#### Day 2

- Finish the HomePage
- Start on the Event Page
- Add Contact Us Section

#### Day 3

- Finish the Event
- Start on Program Page
- Add Contact Us Section
- Check for any Bugs

#### Day 4

- Finish Program Page
- Start on Locations Page
- Add the Contact Section

#### Day 5

- Add any necessary component
- Check for Bugs

#### Day 6

- Finalize and Check any missing things and fix errors
